

How to import BREVERB² banks

Run BREVERB 2. If the preset column is not visible, click the grey circle with a small arrow on the top left corner.

You will see the following user interface:

for any further information, visit www.overloud.com or contact us at info@overloud.com

Point a bank from the **BANKS** list (i.e. the last bank of the list), right/Ctrl-click it and select **Import from file...** (you can choose to insert the new bank **before** or **after** the pointed bank).

The system open file dialog window will show, letting you to select the BREVERB 2 bank to import. BREVERB 2 bank file names have **.ovb** extension.

After the import completes, the main interface will look as follows:

Notice the bank **80s-90s** which has been imported after the pointed bank **PostPro**. You can see the presets of the imported bank listed in the **PRESETS** list below.
